New Fertilizer Production and Warehouse Grand Opening

Agrotain International, LLC, and parent company Lange-Stegmann, held a grand opening celebration of its expansion project during mid-September. The \$20 million expansion includes a new Stabilized Nitrogen Center production facility and the St. Louis Urea Center, urea warehouse storage. The two facilities mark the country's first fertilizer plant using phase modification manufacturing and the nation's largest inland urea import terminal. The manufacturing facility has a production capacity of 125,000 tons annually, and the urea warehouse has 63,000 tons of storage capacity, which will allow Lange-Stegmann to handle one million tons of imported urea per year.
